RE: FORMAL DISSENT — Ethics Committee Vote Re: Phase III Public Launch

PRIORITY: URGENT — TIME-SENSITIVE

SUBJECT: Ethics Committee Vote of Record — Phase III Consumer Integration Launch

I. COMMITTEE VOTE

The QNI Corp Ethics Committee convened in emergency session on 14 January 2071 to review the Phase III public launch proposal submitted by the Product Integration Division. Following three days of deliberation and review of all available trial data, the Committee voted as follows:

MOTION	Proceed with Phase III public launch on proposed Q1 2071 timeline
VOTE FOR	2 members
VOTE AGAINST	7 members
OUTCOME	MOTION DEFEATED
QUORUM	Confirmed (9/9 members present)

II. GROUNDS FOR DISSENT

I am formally registering this dissent and requesting it be preserved in the permanent company record. The Committee's concerns fall into three categories:

A. Incomplete Long-Term Safety Data

Phase III trial data covers a maximum follow-up period of 22 months. The proposed launch will expose the general public to indefinite integration. The substrate's adaptive modeling behavior at the 24-month threshold has not been studied. Internal engineering notes (ref: QNI-ENG-2070-0934) flag anomalous preference-drift signatures beginning at month 19 in 34% of trial participants. This finding was not included in the launch proposal submitted to this Committee.

B. Projected Adverse Outcome Rate

The Product Integration Division's launch proposal includes the following adverse outcome projections for a 340M-person initial integration cohort:

OUTCOME CATEGORY	PROJECTED RATE	PROJECTED ABSOLUTE
Permanent cognitive restructuring (irreversible)	0.11%	~374,000 individuals
Significant personality drift (documented, >30% baseline)	0.30%	~1,156,000 individuals
Acute integration failure	0.03%	~102,000 individuals
Mortality (direct causation)	[REDACTED]	[REDACTED]
Mortality (indirect, 12-mo)	[REDACTED]	[REDACTED]

Note: Mortality projections have been redacted from this distribution copy per Executive Board instruction dated 10 January 2071. Full figures preserved in Level 9 archive (ref: [REDACTED]).

C. Consent Infrastructure Inadequacy

The proposed integration consent process (Appendix D of the launch proposal) presents integration as a consumer opt-in service without adequate disclosure of the substrate's adaptive modeling behavior. Specifically: the consent form does not inform integrating individuals that the QNI will model and influence their cognitive salience patterns, or that these effects may be permanent. The Committee voted 9-0 that the current consent form is materially inadequate. The Board's decision to proceed without revising it is noted.

III. BOARD RESPONSE

I have been informed by the Board Chair that the above concerns have been reviewed and that the launch will proceed on the originally proposed Q1 2071 timeline. The Board's formal response, transmitted 16 January 2071, reads in part:

"The Ethics Committee's concerns have been noted and logged. The Board has determined that projected adverse outcomes fall within acceptable parameters given the scale of benefit to the integrated population. Launch proceeds as scheduled. The Ethics Committee's objections will be preserved in the internal record as required by corporate governance protocol."

I am formally recording that in my professional judgment as Chief Ethics Officer, proceeding with launch under these conditions constitutes an unacceptable risk to public safety and a material breach of our stated commitment to informed consent. I request that this memo be preserved in the permanent record and accessible to any future inquiry, internal or
